

Florida Wildlife and Habitats

This week our Kindergarten classes participated in a presentation about Florida Wildlife and Habitats from the Oakland Nature Preserve. They learned about giant millipedes, the Florida Box Turtle, and Opossums of Florida. They participated in a discussion about the conservation of our environment, and what to do if we see animals that are hurt or injured. Some of our favorite things we learned about were: Opossums can eat snakes, they do not carry rabies because they have a lower body temperature, they play dead to defend themselves, and they have over 50 teeth! A special thanks to Ms. Rachael Cravens for coming to our school!
