

Fairytale STEM Building

Over the past couple of week's Kindergarten has been learning about the genre of "Fairytale". We compared and contrasted the books, explored the themes and how we relate to the characters in the books. At the end of our unit we had a STEM Day! We followed three steps at every station 1. Draw and label your design 2. Create your design and compare it to a friends in your group. 3. Count each of the materials used, circle the most used and add the total together. We used tanagram blocks to create Cinderella's castle, we built a ramp for Rapunzel to escape her tower, The Three Bears Beds, The Three Little Pigs Houses and a bridge for The Billy Goats to cross. We loved using our problem solving skills and investigative skills in a new way!
