

# Chicken Life Cycle

Over the past few weeks in Ms. Haecherl's class we have been learning about different animals and the life cycles of those various animals. One of the life cycles we have been examining closely is the chicken life cycle. The students first learned about the life cycle and did a lot of activities to build their knowledge on chickens, and then the following week we were very excited to have our very own chicken eggs delivered to the classroom. We are using our skills of observation to watch our growing eggs closely and we cannot wait until the 21 days are up and our baby chicks finally hatch! In the meantime here are some pictures to share our baby chicks' journey so far!
