

Fairy Tales STEM Day

4th grade had a Fairy Tales STEM Day. Students worked to help many familiar story book characters. They built a parachute to save Jack from the Giant. They constructed a chair for Baby Bear. They designed a helped wanted poster for the Little Red Hen and then turned it into a paper airplane to send it to the next town. They helped Little Red Riding get her basket to Granny by making a zip line. All the students had a great time working on these projects. They were able to work in a group and share ideas. They were thinking like an engineer when they had to recognize the problem they were solving and test out different ways to solve it.
