

Valencia STEAM Day

Students in Ms. Hurley's and Ms. Thomas' class participated in Valencia College's SWE STEAM Rock! Event. Dr. Deborah Hall, a professor of Electronics and Engineering Technology, spoke with students in depth about the Golden Rectangle. She explained the relationship between phi (1.618...) and how the number is found throughout nature and the man-made world.

Students were divided into teams and worked together to create structures, that had to be replicated using written directions only. It was a great STEAM event.
