

## Solar Oven Project

We have been working on accurately quoting from a text to explain what it says using several different texts including a how-to website that explained how to make solar ovens. In addition this, we started our new unit in Science which is about energy and heat. To put both our reading and science standards into action we created solar ovens and completed a science lab report using them. The students were given the materials they needed and had to follow the procedure given to create the actual solar oven. After the ovens were created we developed our science experiment. The question the students had to answer was, "Will marshmallows or cheese begin melting first using the solar ovens?" The students had an awesome time throughout the whole process and enjoyed eating the results of their experiment!
